DTS THERAPY GENTLY STRETCHES THE SPINE, RELIEVING PRESSURE FROM THE DISCS, JOINTS AND MUSCULAR TISSUES, WHILE ENHANCING THE BODY'S NATURAL HEALING PROCESS.

## 3 PHASES OF DTS THERAPY

- Treatment
- Stabilization of Structure
- Support of Muscular System

he gentle distractive forces of the Triton® DTS creates decompression, the unloading due to distraction and proper positioning, to improve blood flow and important nutrient exchange to the injured area.

Your comfort and safety are of primary importance during DTS Spinal Decompression Therapy®.

Therefore, unlike any other decompression

device, you have several positioning options. Only if you're 100% comfortable will you be able to achieve the ultimate objective of complete rehabilitation of your discs and spine. During DTS Therapy, you'll experience several cycles of stretch and relaxation, which gently graduates to a peak over a period of several minutes.

Therapy sessions typically last less than 20 minutes, and many patients feel pain relief with as few as 8 - 10 treatments. It is important to remember however, that pain

subsiding does not mean that your discs and spine are healed, so it's critical that patients stick with the treatment protocol prescribed by their practitioners in order to achieve the full value of DTS Therapy.

pain-free alternative that has shown a very high rate of success at reducing or even eliminating back and neck pain. If you suffer from chronic, debilitating, low back or neck pain, you owe it to yourself to call our office today to make an appointment to see if you're a candidate for DTS Spinal Decompression Therapy.
