

## When Does A Baby Need a Spinal Checkup?

The late Larry Webster, D.C., the father of chiropractic care for children and founder of the International Chiropractic Pediatric Association, wrote numerous articles on the need for chiropractic for children.

He said that there is a minimum of six times in a baby's first year of life when spinal examinations are especially important:

1. After the birth process.
2. When the baby first holds his/her head up.
3. When the baby sits up.
4. When the baby starts to crawl.
5. When the baby starts to stand.
6. When the baby starts to walk.

With all that you do for your newborn child, please ensure that his or her spinal and nerve system health with a chiropractic spinal checkup.
