

THE FACTS ABOUT AUTO ACCIDENTS

- 80% of all auto accident victims will suffer spinal related health problems, related to their auto accidents up to 15 years after the auto accident-(remember, these statistics resulted from patients whom did not get the opportunity to receive chiropractic care)

-Symptoms related to spinal injuries acquired during auto accidents are often delayed days, or weeks, or months, even up to years-

-At least 35% to 50% of the patients we have seen over the years that acquired injuries from auto accidents, were surprised that they had their pain, suffering and symptoms from their auto accident show up much later after the accident had occurred, and regretted releasing the insurance company of their responsibility too soon-

-It has been statistically released that the two major commonalities that exist in the history of hospice patients (those dieing of cancer), is that they have had either a serious auto accident in their history or a spinal surgery, both seriously injurious to the spine-

-It is the laws of physics (the relationships of mass, density and velocity and energy), that effect the conditions in an auto accident, that allow for severe internal damage and injury to occur to the nerves and tissues of the human body during an auto accident. Does it make sense when an insurance agent or adjuster suggests to you, that there is no injury to you because there is no damage to your car ? Never be fooled by this logic, your body tissues are a miracle of life, but could never be compared to the strength of a steel car bumper forged in Detroit-

- The average weight of a vehicle is in excess of 3,000 pounds, imagine the damage that occurs to football players that are tackled by their fellow players using their weight, that may average from 250 pounds to 350 pounds, compared to that of an automobile that can be propelled easily more faster than a football player can run, thus much more weight, much more mass, much more impact-

-Because of the way in which energy is transfered in an auto accident, serious nerve damage can easily occur after even a 5 mph accident-

-Chiropractic is the only way to correct Vertebral Subluxation (Nerve Pressure and Damage), which is brought on severely by Whiplash from auto accidents-

-Your insurance companies are aware of these health dangers, but have an undisclosed agenda campaign to denounce these realities, and attempt to deny there existence to save money on insurance claims, meanwhile leaving alot of people injured from auto accidents, and not realizing it until later how much it has effected their lives-

Innate Intelligence

Innate Intelligence is the chiropractic word for the intelligent energy that flows within us, over our nerve tissue, from brain to body, that is responsible for all that we are, including our health. When Chiropractic discovered how literally thousands of health problems would get well from aligning the vertebrae of the spine, and freeing up the impinging nerve supply, it was not long before they began to ponder what this energy was, running the course of our nerve supply. They named it "Innate Intelligence". The life force or power that runs the human body and all it's parts, and is infinite in it's power, always knowing exactly what to do, how much, how long, and in what amount, is a small definition of what the Innate Intelligence of the human body is all about.

Did you ever wonder what makes your heart beat? And what speeds it up when your run, or slows it down when you rest or meditate? What controls the 2,000 estimated functions your liver performs? What makes cells grow and divide? It's obvious we DO NOT have to even THINK about any of these things being performed, they occur whether we are sleeping, awake, or doing anything, so we could not attribute their functions to our Educated Intelligence. It is clear to most of us that something from Within controls the whole show, makes things work, and has supreme intelligence.

You know what I mean. When 2 cells come together, divide and divide, and in 9 months we have a small miracle, that is what the power of "LIFE !" is all about. We refer to it, and it's qualities as Innate Intelligence. Amazing that it can guide your body for over 100 years, and that it can create human beings, and perform so many functions, and you don't even have to think about it !

So now you know what heals. Yes, the Innate Intelligence of the human body is the ONLY healing power there is, and it is your nerve supply that provides the physical transport for the Innate Intelligence to supply every organ, tissue, and cell in your body. This makes your nerve supply the most important organ in your body, as it directly conducts the Innate Intelligence to all the rest of the organs.

This is why so many people get ill in this world. It is not because they come in contact with so many germs, and bacteria, but rather something has blocked the flow of Innate Intelligence from freely flowing over their nerve supply. That blockage comes in the form of Vertebral Subluxation. When the top "ring shaped" vertebra #'s 1 & 2 slide from their normal position and put pressure against the heart of your whole nerve supply, the brainstem, they cut off the flow of Innate Intelligence. This in turn robs the "life force" from throughout your whole body from all different parts of your body. This causes organ malfunction, death of cells, and finally pain and symptoms. But, long before symptoms and pain show up, you can keep your Vertebral Subluxations corrected, keeping the power of your body, the Innate Intelligence flowing 100%, and thereby avoiding allowing your body to become sick in the first place. Avoiding cell death from accumulating, avoiding malfunction of your body parts.

You see, what we call sick is when we feel pain and symptoms. But the truth is, before we feel that way, imbalance, dead cells accumulating, organ dysfunction, all begin long before we feel pain and symptoms due to Subluxation. This is why it is important to GET CHECKED FOR VERTEBRAL SUBLUXATION WHILE YOU FEEL WELL, TO AVOID GETTING SICK. I have never seen an infant, child, man or woman sick or pain free whom did not benefit and improve their health by staying subluxation free!

The Removal of Sick, Dead and/or Old Cells

A major health function of the human body which has not been taught to you, is the necessity for the human body to routinely remove from itself, old cells. Daily your body has cells dying that need to be removed, as through filtration, sloughing, and physical removal. If your body is not functioning 100% with a full nerve supply, it will be unable, and fall short of it's ability to remove all the cells properly. In time, the dead cells will accumulate until another force must move in to remove them. Mother nature. Whom allows bacteria, viruses, and or germs to feed off the old dead cell accumulation to get rid of them.

In a normal functioning human body, cells dye at different rates and are carried off by the body, and are replaced by new cells. This takes place in all organs. Some are much slower than others, but the basic daily purpose of the human body is to replace itself one cell at a time.

Cells that lack a nerve supply die, cells that have an altered nerve supply that has changed from it's basic force as it was initially created, may produce abnormal cells. In either case they add up to ill health, one cell at a time. Pains and symptoms arrive eventually, maybe years or decades later from an accumulation of sick and/or dead cells.

The largest, most widespread, yet subtle and mostly unknown cause, of a human body becoming ill in thousands of different ways, is from accumulated sick and dead cells from a blocked or altered nerve supply due to Vertebral Subluxation. A vertebral subluxation is when the upper two cervical vertebrae at the top of the neck misplace and restrict the flow from the brainstem.

What Is A Vertebral Subluxation ?

A Vertebral Subluxation occurs when a vertebra in your spine misaligns slightly, making the opening where the nerve supply passes through smaller, causing interference to the nerve supply. This alters and blocks the messages and mental nerve energy that normally passes through your nerve supply. The way our bodies are designed, they are essentially a composite of physical tissues that come alive as a result of our life force being distributed, throughout the entire human body by way of our nerve supply. Therefore, our nerve system provides a very important function, supplying our very life force that makes us alive!

This requires many millions of fine nerve fibers transporting our life energy to each and every cell in the human body, and they all begin at our brainstem. From our brainstem, every single nerve fiber begins, and travels down the spine as spinal cord tissue, and then branches out through 62 nerve roots, 31 on each side of the spine, each distributing nerve energy to over 500 million nerve fibers from each nerve root to all the cells.

Most of us have never been taught to think in terms of how much power runs our body. But that is exactly what is required to have a 100% properly functioning body, 100% life energy. If we have an uncorrected vertebral subluxation, it will reduce the energy flow to the body, creating cell death in various organs and locations throughout the body. It should also be remembered that this life energy is very intelligent life, and knows exactly what to do for the survival of our body in all instances, at all times.

The dilemma that most of us experience with respect to our health is that we are failing to be taught and educated that vertebral subluxation even exists, and yet it is, for all of us, the basic underlying cause of a malfunctioning body. Subluxation is so common for all people, that it effects all of our lives on a daily basis, gradually killing cells and destroying the proper functioning of our body.

Vertebral Subluxation primarily occurs when misaligned vertebrae produce pressure on the brainstem, located directly beneath our skull. The difficulty exists with the subluxation, because the vertebrae producing the pressure on the brainstem cannot be felt, as there are no sensory nerve endings to produce feeling in the central nerve supply. Therefore, the vertebrae, when it misaligns, can and usually does produce a great amount of pressure into the brainstem that we are never aware of, we can never feel the pressure, thus giving vertebral subluxation

the slang name of "Silent Killer". As a result, most people have vertebral subluxations very gradually producing an accumulation of dead cells and resultant sick tissue throughout all organs of the body over a gradual period of time.

The longer the subluxation is allowed to exist before we finally have a symptom, pain, or warning sign, the more damage occurs to our bodily organs. Because of this one factor, subluxation is a very dangerous foe, accumulating damage for years before a person becomes aware they have a health problem. If we truly wanted and expected to do what is necessary to keep our health at it's peak potential, and allow our body to express it's fullest life expression, then we would take care of keeping our subluxations regularly corrected throughout our whole life to offset subluxation's damaging effects. We would understand that subluxation occurs long before we start thinking about taking care of our health due to symptoms or pain. And doing something about it now, is much more prudent than waiting.

Today we live in a society that is dominated by the medical principle of drugging for every health condition we may have, and then removing our organs once they become so bad that they fail. We even swap them for other peoples organs. No medication or drug can heal the tissue of the human body, only life energy can heal. All drugs or medications, regardless of what kind or type have damaging side effects, and all are contrary to the principle of allowing the body to function properly, free of interference. They have taught us to wait to get ill.

The medical community is so powerful with this ideology, that they have managed to implement almost absolute control of health in this country. They have allowed nothing to get in their way. History shows they have intimidated all competition that has come in their way both economicly and politically. The dangers of vertebral subluxation, and the importance and effectiveness of subluxation correction therefore, has barely reached the public.

To educate the public on the tumors, infertility, impotence, incontinence, migraine headaches, ear infections, hearing loss, paralysis of limbs, and all the other problems that have gotten well in chiropractic offices will never supplant the importance of correcting subluxation before these problems arise. Correcting subluxations is the single most important health endeavor you will ever pursue. Vertebral Subluxation is the basic underlying cause of a malfunctioning body.

PREVENTION

Health is NOT about waiting to get sick. It is NOT about waiting for symptoms and pain to appear before taking action for the benefit of your health. Health is doing all that one can do now, to get healthy and stay healthy. Take action to prevent oneself from becoming ill. The world's greatest secret to avoiding ill-health, and the actual real cause of so much ill-ness in our world, is the correction of vertebral subluxation.

The vertebral subluxation that traps the "life energy" of the brainstem, is the CAUSE of ill-health. It gradually damages our organs, and our health for years before a symptom or pain shows. It results in a body that does not function correctly, and can manifest itself in thousands of different sicknesses, pains, and diseases. All bodies have to mal-function first on the inside before eventually manifesting symptoms and pain on the outside.

It is the medical profession that has taught us to act only once we have gotten to the stage of pain and symptoms. This is always the latest or final stage of the process of ill-health. The drug companies and the medical industry make billions of dollars a year due to the effects that vertebral subluxation has on the health of the human body.

Why wait to get ill, keep your subluxations corrected now, and maintain a 100% healthy nerve flow, so your organs and body do not damage. Remember, most of what vertebral subluxation does to violate our health is to gradually accumulate damage in our bodies for years before we become aware we have a problem. This is why it is called the "Silent Killer". Don't give subluxation a chance to get a hold of your health, keep your nerve supply flowing with chiropractic care, and prevent damage from occurring. Subluxation is that sneaky and deceptive when it comes to the effects it has on your health. Don't fall into the medical trap of believing you are healthy just because you may feel fine, and have no symptoms. Vertebral subluxation is a life taker, and must never be underestimated.

As long as you ignore taking care of your vertebral subluxation, your health will be controlled by drugs and eventual surgery.

There are Three Factors Regarding Your Spine That are necessary to have good health.

1) Regular correction of a bone, misaligned, interfering with your nerve tissue, altering the messages from brain to body.

2) Time for unhealthy, sick, degenerated nerves, and bodily parts and organs to grow, heal and restore to full function.

3) At the moment a patient feels totally free of symptoms and pain, the greater amount of damaged tissue still exists inside. Their body has just begun to heal, internal healing and strengthening will continue inside, where you can't see or feel for a long time, while chiropractic adjustments continue.
