

Zimmer MedizinSysteme, our German parent company, has over 50 years of experience in manufacturing high quality medical devices. Originating as a manufacturer of physiotherapy devices, Zimmer MedizinSysteme has rapidly evolved as a global leader not only in the field of Physical Medicine, but also in Aesthetic Medicine, Whole Body Cryo Chambers, Diagnostics, and Podiatric Medicine.

The company's core strengths and competencies are focused on a singular drive to promote human health. Zimmer MedizinSysteme draws inspiration from medical science, modern technologies, and of course the end user's needs.

Each of our medical products is developed with highly scientific and practice-oriented criteria. Therefore both, scientific studies and practical experience benefit our users.

emFieldPro High Energy Inductive Therapy

Available in this Office

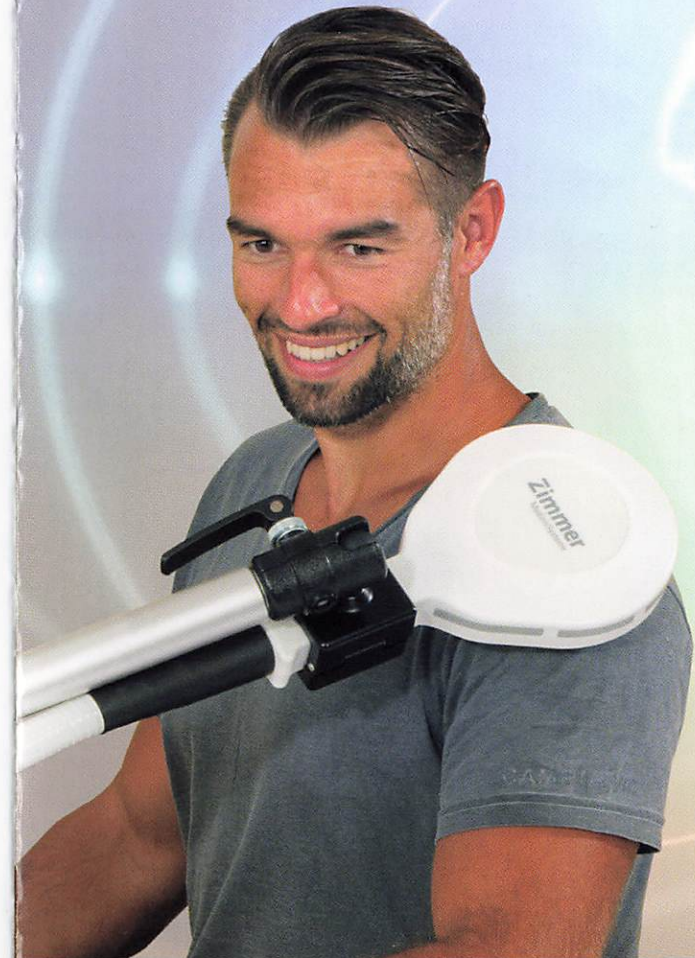

“A patient came in for a second opinion because of pain in her elbow. Earlier therapies that had been suggested were very painful and didn't achieve any results. We offered her two painless emFieldPro sessions and her elbow problems were completely relieved.”

- Nijas Backer, Physical Therapist, Dubai, UAE

“emField is the best! I'm so happy with the machine and treatment results I'm getting for my back pain.”

- Claudette Groenendaal
Patient, Los Angeles CA

**emFieldPro
Inductive Field Treatment**

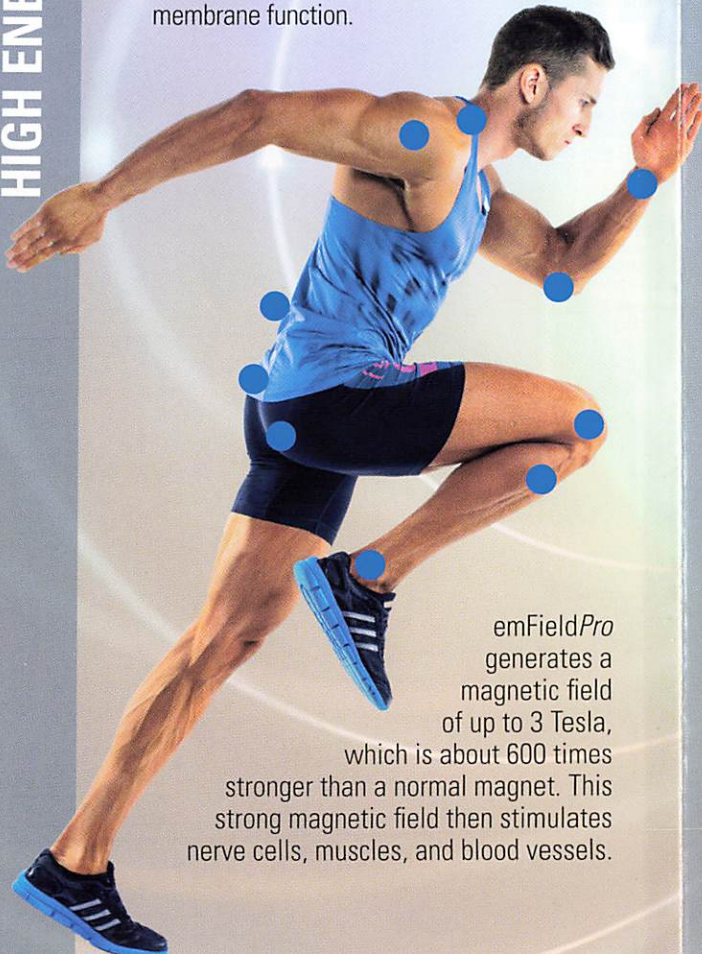

Ask your healthcare provider how
High Energy Inductive Therapy
can help you!

The human body is a good conducting medium and that also applies to magnetic fields. As ions in a cell have a charge, the cell membrane also needs a certain amount of charge.

The membrane charge of normal, healthy cells is higher than that of diseased or aged cells, including bacteria and viruses. When the cell membrane charge is low, the cell has too little energy to perform its normal function.

Therefore cells need energy, and stimulation via an electro-magnetic field is known to increase this energy and optimize the function of the cell.

Electromagnetic fields can penetrate cells, tissues, organs and bones without any change or loss, activate the electrochemistry of tissues, and improve cell and cell membrane function.

emFieldPro generates a magnetic field of up to 3 Tesla, which is about 600 times stronger than a normal magnet. This strong magnetic field then stimulates nerve cells, muscles, and blood vessels.

High Energy Inductive Therapy on Lumbar Spine Conditions

“It has been very beneficial with a wide variety of conditions. With the depth that it penetrates, it has been extremely effective for lumbar spine conditions. I have been amazed at how effective the emFieldPro has been.”

- Chuck Bagwell, Doctor of Physical Therapy Yorba Linda, California

High Energy Inductive Therapy on Hypertonic Musculature

“In the management of spastic or hypertonic musculature, I have found that utilizing the emFieldPro not only relaxed the musculature, but provided a great pain management mechanism, as well – in as short as a 20 minutes.”

- Farley Brown, Doctor of Chiropractic Fallbrook, California

Post-operative High Energy Inductive Therapy

“I had a patient who had undergone elbow surgery and was not able to return to work for almost a year. He had tried various therapies that did not produce results. By the time he sought treatment with me, he was suffering from Chronic Pain Syndrome. We started a multi-disciplinary approach, combining emFieldPro, intense exercise, and manual techniques. Within 6 weeks, the patient was able to resume part-time work, and after 3 months he was completely back on track.”

- Ralf Mühlhäuser, Physical Therapist Ulm, Germany

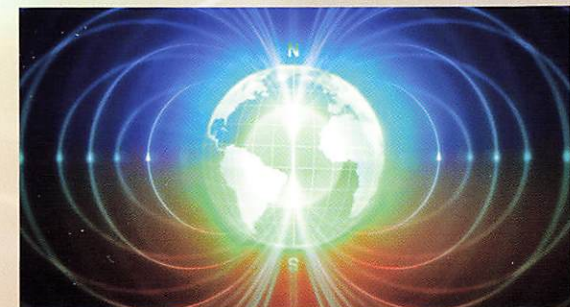

Combined application - static & dynamic applicator heads
